Référence 34279

Stereoscope

In 1838, Sir Charles Wheatstone invented the stereoscope, an instrument that allowed drawings to be viewed from two different angles, creating a three-dimensional effect.

The development of photography transformed the stereoscope, which had been nothing more than a scientific curiosity, into a favourite pastime of the upper middle classes from 1850 onwards. This model is a reproduction of the one made by Oliver Wendell Holmes in 1862.

Includes 12 stereoscopic images. Origin: Spain
Period: New
Materials: Wood

Dimensions: H 15 x 37 x 12 cm
